

SECOM-D-366

7 SEP 1978

MEMORANDUM FOR: Director,  
Federal Bureau of Investigation

ATTENTION: David Ryan  
Security Officer

FROM: Robert W. Gambino  
Chairman

SUBJECT: Request for Assistance - Creation of  
Controlled File

1. As you are aware, the Security Committee, for some time now, has been wrestling with the problem created by the unavailability of a central repository for adverse security information relating to the disapprovals of candidates for access to Sensitive Compartmented Information (SCI). I believe that the creation of a central repository for such information is necessary and that the FBI might be able to assist with resolution of this problem.

2. Could the FBI establish a controlled file for the purpose of maintaining information submitted to them by individual members of the Intelligence Community in connection with SCI denials?

3. Such a file would enable security officials of the Intelligence Community to make an expeditious check. This procedure would expedite processing and would significantly enhance the security of the program.

4. Attached is a proposed format that would be executed by contributing Intelligence Community departments and agencies.

ATTACHMENT 2

5. The undersigned is available for discussion of the implementation procedures. Upon agreement, the implementing procedures will be presented to the Security Committee for adoption.

STAT

7. Your early consideration of the foregoing will be sincerely appreciated.

FOR THE DIRECTOR OF CENTRAL INTELLIGENCE:

STAT

Robert W. Gambino
